

LIST OF FIGURES

1.	Map of Albemarle-Pamlico estuarine study area	2
2.	Factors controlling the expression of plant community physiognomy and species composition of coastal wetlands in North Carolina	3
3.	Map of study area showing geographic areas used for summarizing shoreline characteristics from NWI maps.	15
4.	Part of a NWI map illustrating sampling points and other features of the shoreline	16
5.	Frequency distribution of fetch for Albemarle South, Alligator River, and Pamlico North.	23
6.	Frequency distribution of distance from shoreline to 6 foot depth contour for Albemarle South, Alligator River, and Pamlico North	24
7.	Frequency distribution of distance from shoreline to nearest upland site for Albemarle South, Alligator River, and Pamlico North	25
8.	Importance values of woody species at Chowan River site .	30
9.	Importance values of woody species at Grapevine Landing site.	34
10.	Importance values of woody species at Poplar Point site .	37
11.	Size class distributions for live and dead trees, as proportion of total numbers for Chowan River, Grapevine Landing, and Poplar Point sites	39
12.	Elevation of Grapevine Landing and Poplar Point transects relative to water surface at the time of leveling	40
13.	Depth distribution of sediment texture at Chowan River, Grapevine Landing, and Poplar Point sites	41
14.	Top: Cross section of current zonation of a tidal marsh and zones after a net rise in sea level of 40 cm. Bottom: Conceptualized cross section of nontidal fringe swamp and interior wetlands in areas of the Pamlico and Albemarle Sounds of North Carolina	50
